

## **AMENDMENTS TO THE CLAIMS**

1. (Currently Amended) A method for taking a photograph using a mobile communication terminal having a camera, the method comprising the steps of:
  - entering a remote-control photographing mode;
  - receiving a call having a caller ID (CID);
  - determining whether the CID of the received call corresponds to a CID stored in a memory of the terminal;  
determining whether the received call should be accepted or rejected before alerting a user, if it is determined that the CID of the received call does not correspond to a CID stored in the memory of the terminal;  
releasing the remote-control photographing mode, based on results of the determination of whether the should be accepted or rejected; and
  - operating the camera to take a photograph when the CID of the received call corresponds to the stored CID.
2. (Original) A method as claimed in claim 1, wherein the call includes a telephone number and a message of a short message service (SMS).
3. (Original) A method as claimed in claim 2, wherein a remote-control setting screen for inputting telephone numbers assigned to remote-control the camera is displayed upon entering the remote-control photographing mode.

4. (Original) A method as claimed in claim 3, wherein the remote-control setting screen includes a menu for determining acceptance or rejection of a call having a non-assigned telephone number.

5. (Original) A method as claimed in claim 4, wherein the SMS message is displayed on the menu for determining acceptance or rejection of the call having the non-assigned telephone number.

6. (Original) A method as claimed in claim 4, wherein a call-back number included in the SMS message is stored in the memory of the terminal for operating the camera to take a photograph.

7. (Currently Amended) A mobile communication terminal having a camera comprising:

a storing section for storing telephone numbers assigned to remote-control the camera; and

a control section for:

operating the camera to take a photograph when a remote-control photographing mode is selected and a telephone number of a call received in the mobile communication terminal matches at least one of the telephone numbers assigned to remote-control the camera; and

releasing the remote-control photographing mode, if it is determined that the

telephone number of a call received in the mobile communication terminal does not  
match at least one of the telephone numbers assigned to remote-control the camera and an  
acceptance setting was previously set.

8. (Currently Amended) A mobile communication terminal as claimed in claim 7,  
wherein the call includes a ~~message of a short message service (SMS)~~ message.
